SDG 6 – Indicator 6.5.1 - Water management educational opportunities

Improving the Awareness of the Local Community around the Musi River about Water Issues

Universitas Sriwijaya (UNSRI) service team conducted a joint service activity with the University of North Sumatra. This activity aims to overcome the problems of the Musi River, especially water governance, preservation of local culture, and ecotourism. This service activity involves the local community, who are residents around the Musi River. With this activity, it is hoped that local community participation in preserving the water area environment and creating a water-based creative economy can increase with better understanding and management of water.
